SRA STREET CAMERA SYSTEM – ACTIVITY SUMMARY

September was our first month monitoring the St Francis Bay street cameras, and we ensured there was no downtime in monitoring, particularly at night, while the new cameras were being installed and set up during the day. The initial installation and configuration resulted in a high number of false triggers, with more than 29,000 alerts received by our Control Room. Of these, our dedicated Response Officers were dispatched to investigate 81 alerts. As the installation of the remaining new cameras continues, we expect another high number of false triggers this month while the system is being fine-tuned. For this reason, the September figures are not directly comparable with our usual alarm activation and response statistics.

LOCAL PATROL COVERAGE – 22,236 km

Our response team covered **22,236 kilometers** during September, responding promptly to alarms, incidents, and patrol requests throughout the St Francis area.
